It’s never too late to learn properly or improve your skills. The Motorcycle Safety Foundation offers several programs from beginner to advanced. Some of these classes are held in West Orange at the Armory on Pleasant Valley Way. Visit www.msf-usa.org for more information. If you have any questions please feel free to contact the Traffic Bureau at 973-325-4045.

Safety tips to our motorcycling residents.

- **Make eye contact:**
  Never assume others see you.

- **Read vehicle language:**
  Even when drivers, cyclists and pedestrians do see you approaching, they often misjudge your distance and speed. Don’t rely on them.

- **Watch for left-turning vehicles at intersections:**
  Getting hit by an oncoming vehicle that’s turning left is the most common type of motorcycle crash.

- **Check behind when turning left from a highway:**
  Watch your mirrors and make sure you have plenty of space behind. The drivers behind might not slow down for you.

- **Look out for hazardous road conditions:**
  Wet roads, fluid spills, sand, gravel, highway sealant, railroad tracks, potholes and other road-surface hazards reduce your traction. They cause many falls.

- **Wear a good helmet:**
  Helmets prevent head injuries in 67 per cent of crashes and deaths in 29 per cent. Make sure your helmet has a sticker showing that it meets current safety standards. Avoid buying a used helmet. It may have been in a crash, and the damage may not be obvious.

- **Wear protective clothing designed for motorcycle riders:**
  It can provide some protection during a crash, as well as shield you from the weather and flying debris. Keeping warm and dry will help you stay alert and maintain coordination. Wear your riding gear in layers so you can adjust to changing conditions. Jeans give little protection. Never ride lightweight pants or shorts.

- **Take it easy on the curves:**
  Many crashes happen there. You might overshoot the road or cross the center line and get hit by oncoming traffic. Watch the road ahead, slow down and choose the correct lane position—before entering a curve.

- **Protect your eyes and face:**
  Constant wind can make your eyes water, preventing you from spotting hazards. Flying insects, dust and debris can hurt your eyes and face. The best protection is a full-face helmet with a built-in face shield.

- **Be visible:**
  Wear bright, reflective clothing. Add extra reflective material to it or wear a reflective vest. Likewise, buy a bright-colored helmet and stick reflective tape to the back and sides. Always keep your headlight on. Ride in the lane position where other drivers can easily see you and you’ve got room to move. Avoid all other vehicles’ blind spots.
